

SegWatch System information

The Segwatch system is a unique and first integral solution of satellite tracking of personal transporters Segway.

Provozovny

The Segwatch system is a unique and first integral solution of satellite tracking of personal transporters Segway.

The Segwatch system is a unique and first integral solution of satellite tracking of personal transporters Segway. The Segwatch system is a unique and first integral solution of satellite tracking of personal transporters Segway.

Users

The Segwatch system is a unique and first integral solution of satellite tracking of personal transporters Segway.

SegWatch Business Introduction

The SEGWATCH system is a unique and a first integral solution of satellite tracking of personal transporters Segway designed both for business (industrial plants, distribution centers, security area, Segway rentals, etc.) and for individuals.

SEGWATCH is the only functioning monitoring system that is built into the Segway PT. The advantage of the SEGWATCH system is that it draws power from both the Segway PT batteries and its own battery if needed. With the dual power supply the SEGWATCH system is protected against decommissioning, for the GSM/GPS localization the SEGWATCH system uses a technology with a very high sensitivity of GPS signal reception, and therefore it is possible to determine the position of the Segway PT in densely built-up areas and urban traffic.
